Abstract

The purpose of the report is to see how computer technology is able to fit itself in small business sectors that involved in education development. One small business regarding education is rising in terms of number is tuition centers. Few years back, most of this center depends solely on traditional methods in managing their business; this goes from the storing of their student or teacher's personal details, examination question, and reports of student's results. All details will be gathered by doing a survey on a couple of tuition center nearby. By using different methods surveying and researching a few different resources, 2 types of data can be obtain; primary data and secondary data.

In order to obtain more accurate findings, both primary and secondary data analysis are applied in this report. Firstly, there are many primary data, such as questionnaires, interviews and observation is used to collect statistic from selected individual from the survey fields. Secondly, secondary data such as journals, articles in newspaper, reports, online articles, as well as other related resources are used to understand tuition center and computer requirements deeply and completely. The analysis and results from the survey and research is shown in related chapter in the reports.
