Abstract

Students in UCSI University, always having difficulty during the beginning of every semester due to the time table changes and student are not notified. All these are because the students are not notified about the changes of timetables. Problem occurred not only because of time table changes during the beginning of the semester, it is also caused by sudden cancellation of class by lecturers. There is no other way to tell the students except by posting the cancellation notice outside of the classroom and by this the students going to college for nothing.

The purpose of this research paper is to suggest and implement Personalised Web-blog Notification System to UCSI University with features and functionalities required by students to increase student satisfaction and deliver excellence in administrations and online blog announcement. An evaluation is carried out to gather student's point of view. The methodologies used in this report are documents reviews and questionnaire. To achieve the aim of this research, a prototype application is developed to fulfill the requirements of the students.
