Abstract

e-TAL (Talent search system with data mining integration) – Decision Support System which utilizes talent as the key business concept. Maneuvering with a few clicks, the system will allow the talent agents/organizations to perform talent searches, in which would enable one to search for talents of all categories worldwide. e-TAL would enable the talent scout agents to even conduct predictions and Data Mining forecasting techniques as e-TAL is equipped at integrating and implementing Data Mining technology into the system. This system would seek to benefit mainly the talent agents/organizations, public talents and owner of the system.
