**Funky Hair Salon System**

Kevin Yong King Wee

2006

**Abstract**

As a teenager, it is always the challenge to dress up in a presentable look to the public. It has believed nowadays everyone getting more and more aware of how themselves present to the public. This will involve thing call fashion so do same as styles. Nevertheless on of the main fashion or styles is the hair design.

In this application, there are server and client involved. The application is design to fulfill or aids the salon industry thus also satisfying the current century customer's needs. The fact that this application is solely for industry purpose; it is design for the customer to actually have a forecast of the styles they desire before their hairs being cut. The funky hair salon system is basically logic designed by the programmer which able to change the standard of the particular salon with the system set up.

However it also consist basic functions for a normal system. Such as calculation, bookings, databases. The aim of this project is to design and develop an advance system for salon industries company in order to handles the daily transaction.

*Abstract should be  
summary of each chapter.  
Abstract is not about the  
application you develop.*
