The Degree of
BSc (Honours) Computing for Business
At the University of Northumbria

Project Report

A Study in the usage of Pocket PC in the Restaurant
management System

Student name: Anas Mohammed Redwan

Student ID: 99207754

Computing for Business 3+0

Supervisor: Mr.Chee

2004/2005

Abstract:

During this report there are many different points will be discussed, such as the planning for the project, the different phases of developing the product and overall a description about what have been done during the life time for this project.

Through the report the reader will find different chapters highlights the important of work that undertook to solve the problems discovered during the stage of gathering the information and the requirements of the users and the system.

At the beginning there is an introduction that provides a background about the main elements of this project, such as introducing what is the main aim of this project, later on the aims and objectives of the system are provided to give the reader an idea about what should be achieved at the end of this project.

At the second level of the report, Analysis stage present the way that the researcher of the system handled the system problems and requirements by using the appropriate methods and techniques such as Use Case Diagram.

Moreover the design stage will follow next after the analysis stage, to highlight how the system was built base on the requirements of the users and the usage of the tools that was analyzed before.

The project implementation emphasis the users manual and the recommended installation also how the process of the testing the product was executed, and that will be followed by evaluation of the project at the both side the product by displaying the strengths and the weaknesses, and the project processes.

At the end the appropriate way for using the product is explained in order to achieve the best results, and what are the main difficulties that faced the construction of this project.

And later the conclusion will end this project with summarizing the main points, and what are the real output comparing the objectives of the project that were allocated at the beginning.
