Abstract

Overall, this project undergoes a research on the in-depth observation and inquisition on the child's growth. Several high level literature reviews on the growth of child are conducted within this report. At the meantime, a survey is carried out in order to get the potential user's opinions which the result will be used to develop the propose prototype. The prototype is implementing as a web-based application as web technology is advance and Internet can be access most of the time.

The introducing of the prototype is aim to assist public in the observation and inquisition on their child's growth by providing some features and useful material. At the end, the proposed prototype is being evaluated by the users according to certain criteria. After all, the proposed prototype still has to be expanding in terms of the building quality and tends to be more robustness in the near future.
