Abstract

Face Analysis System is a system which is dedicated to students in UCSI University to have facial features analysis. The system provides variety of methods and also solutions for student to analyse a person's personality. There are few features like facial features will be presented in the format of icon which categorized into a tab lists and combining explanation of all facial features to create a conclusion after creating a human face. Extra explanation is available for users for more knowledge on facial features. Printing function is also enabled after the results of the analysis is generated. Since it is a web-based system, it is available for users to access whenever there is internet connection from their personal computer to the World Wide Web without any fees charged from using the system.
