ABSTRACT

Online Job Application has been the latest method for a job seeker to apply for a job. There are many Online Application portals available on the internet. Most of the companies prefer online job application then the traditional way which is by post.

Online Job Application is fast retrieval, easy storage and paperless. But yet there are limitations: such as when a job seeker has applied through online, they have to check for their reply via email. This takes up a lot of time and hassle, since the job seeker has to check time to time for the reply. Therefore to reduce this hassle Mobile E-Portfolio has been designed.

The Mobile E-Portfolio has the capability to send a SMS to the job seekers mobile device. This way the job seeker can be notified at anytime.

As a conclusion, the Mobile E-Portfolio would have been a system that could be commercially used throughout the nation if it would have been a successful. The limitation would hopefully be resolved in the near future so that Mobile E-Portfolio system would be a successful project.
